Projects

Attendance Management System GitHub	2025
- Developed an Attendance Management System using C++ to record, store, and manage student attendance efficiently. Implemented features such as adding student records, marking attendance, and viewing attendance reports using file handling. - Improved accuracy and reduced manual errors by automating attendance tracking through structured programming and data management.	
CareerForgeAI — Full-Stack AI-Powered Career Preparation Platform GitHub	2026
Developed CareerForgeAI, an AI-driven platform that analyzes candidate profiles and tailors resumes to specific Job Descriptions (JDs) for improved ATS compatibility. Integrated Google Gemini AI 2.5 Flash to generate match scores, identify skill gaps, create personalized interview preparation strategies, and produce role-specific technical and behavioral questions. Built a secure MERN Stack application with JWT authentication, email OTP verification, and protected API routes. Implemented automated ATS-friendly PDF resume generation using Puppeteer, converting dynamically generated HTML resumes into professional downloadable documents. Designed an interactive user interface with React, SCSS, and modern dashboard components to provide personalized preparation roadmaps and interview guidance. Utilized MongoDB and Mongoose for structured storage of user profiles, interview reports, skill-gap analyses, and preparation plans. Key Features: ATS Resume Tailoring, AI Match Scoring, Interview Question Generation, Skill Gap Analysis, Personalized Learning Roadmaps, Automated PDF Export...
