Projects

Attendance Management System | | [GitHub](#)

2025

- Developed an Attendance Management System using C++ to record, store, and manage student attendance efficiently. Implemented features such as adding student records, marking attendance, and viewing attendance reports using file handling.
Improved accuracy and reduced manual errors by automating attendance tracking through structured programming and data management.

Smart Hostel Complaint Management System (Building) | |

2026

- Designing a Smart Hostel Complaint Management System to allow students to submit complaints and track their resolution status online.
Implemented admin panel features for complaint verification, status updates, and efficient complaint handling.
Improved communication between hostel authorities and students by providing a centralized and organized complaint management platform..
